WHITES GROUP PROMOTION

Whites Group is a wholly Australian-owned and operated family business with over 40 years' experience. Which is important to Lincoln Rural as we always do our best to support local companies and industry. Where possible their fencing range uses Australian steel and is built in Australia .

Their key brands, Stockpost and Whites Rural, are nationally recognised. Rural fencing is fundamental to the farming community .

BBQ Give-away

WIN

A WEBER BABY Q & BABY Q DUFFLE BAG!

1 JULY - 30 SEPTEMBER 2021

Purchase \$250 or more of any **Whites Rural** products at **Lincoln Rural** to go into the draw to win these great prizes

Webster Baby Q 1200

8340 RRP

Baby Q DUFFLE BAG 180.00 RRP

Spend a minimum of \$250 on some Aussie made Stiffstay to go into the draw to win a Baby Q. Promotion available at both stores.

BLACKLEG UPPER CANOPY INFECTIONS

Blackleg is able to infect all parts of the canola plant. Lesions form on leaves throughout the growing season. However, severe crown canker is most likely to develop when plants are infected during the early seedling stage. The fungus grows from the cotyledons and leaves asymptotically through the vascular tissues to the crown where it causes necrosis resulting in a crown canker at the base of the plant.

Winter is the main period in which conditions are generally most conducive for infection as rainfall triggers release of mature spores from crop residue and provides ideal conditions for the fungus to survive while it infects the crop. Once the plant has begun to flower, infection of flowers, peduncles, pods, main stem and branches of the plant has collectively been termed Upper Canopy Infection (UCI).

UCI can cause yield losses of 20-40 per cent and management primarily centres on selecting cultivars with effective major gene resistance and using crop management strategies to delay the commencement of flowering to later in the growing season. Studies suggest that canola crops flowering in late July and early August were at a much higher risk of developing UCI than those flowering later in August.

BLACKLEG UPPER CANOPY INFECTIONS.. CONTINUED

Research suggested that if UCI infection occurred, fungicides used to control Sclerotinia were also likely to reduce UCI severity and yield losses. Application of registered products Prosaro® or Aviator® Xpro for Sclerotinia control around 30 per cent bloom can also provide protection from blackleg infection during early flowering.

While the recent research work has demonstrated the effectiveness of fungicides to largely control UCI in flowers, peduncles, stems and branches, it did not always deliver yield returns.

In some situations, the economic response was large, with 20-30 per cent yield increases but in other cases, the return was negligible. To determine the probability of economic response to fungicides growers need to look for new leaf lesions occurring up the canopy and also at the commencement date of flowering. If lesions are present and flowering commences prior to mid-August then the probability of yield loss from UCI is greatly increased.

COMPASS FEEDS– MAGFORCE

This product is recommended for use where a high requirement for Magnesium, Zinc, Vitamin E and other Macro and Trace elements is advised.

A superior blend of magnesium sources, calcium, soluble carbohydrates and key micro- nutrients and delivers a highly effective nutrient package to all classes of animals at key production phases Pre & Post lambing, winter/ spring/ production grazing and Weaning.

CONTAINS

- Calcium
- Magnesium
- Soluble carbohydrates
- Salt
- Bentonite
- Zinc
- Copper
- Cobalt
- Selenium
- Vitamins A,D,E and B1

Magforce can be supplied free choice to sheep including Lambs, pre Lambing ewes and Lactating Ewes. Magforce is an ideal supplement for animals grazing and has been widely used in conjunction with other products in strategies where grass tetany causes production problems. Or where the animal is affected by a lack of magnesium due to the interference of magnesium absorption in the rumen by potassium (K) excess in the diet.

Mg is an important component of cerebrospinal fluid, the fluid that surrounds the brain and spinal cord and is necessary for the transmission of signals throughout the animal's body.

Vitamins A, D & E are associated with the involvement of improved immune response, membrane integrity, antioxidant activity and assisting with improving muscle function and ease of lambing.

High Vitamin E levels are added to support antioxidant and Muscle function issues.

Magforce is ideally supplied at least 6 weeks prior to lambing and can be fed right through to weaning. Valuable as a Magnesium source during lush Spring pasture growth.

Used essentially as a supplementary lick, this product can also be mixed with grain or top dressed on hay.

Dose rate:

Sheep 10-20 grams per animal per day

Cattle: 80-100 grams per animal per day

Pack: 25 kg BAG

Timing: Autumn/ Winter/ Spring, prior to Lambing. Feed through to Weaning.

And is an all-weather formula.

Available at both stores

COMPASS FEEDS- SHEEP MIX

A balanced muesli style feed containing barley, cracked lupins, oats, cracked maize, Lucerne chaff, ruminant pellets (vitamins and minerals plus buffer), molasses and canola oil. Ideal for young sheep at 18% protein.

A specifically formulated feed to ensure that the natural flavours entrapped in the ingredients are released for the full benefit of taste and palatability.

Pack: 20kg bags and minimum 500kg bulkas

Available at both stores.

NUMNUTS

numnuts[®]
Targeted pain relief for marking

A new ergonomically designed tool which provides pain relief to testicles and tails at marking time. Numnuts applies elastator rings while simultaneously injecting an optimal dose of NumOcaine local anesthetic.

Key Benefits:

- Operator safety
- Speed & ease of application
- Reasonably low cost
- Improvement in lambs recovery time

HAY SHACK

NEED A SAFE HAY FEEDER FOR YOUR HORSES?

\$1,240ea
Including Freight!

Taking Orders Now

Order now to secure a spot on the next shipment from The Poly Place - WA (orders are placed in lots of 5 only)

Select your colour and number of head openings (up to 4)

*Freight included is delivered to Lincoln Rural Port

EVERY HORSE WEIGHT GAIN

Cool Feed suitable for all horses, ideal for show horses, horses in light to medium work and retired horses. Helps increase body condition and muscle development.

LOW GI
Balanced, slow release energy for sustained performance.

BUILDS TOPLINE & HELPS REPAIR MUSCLES
Contains essential amino acids, for top quality protein.

ULCER FRIENDLY
Designed to be sympathetic to the digestive system - grain free and very low starch.

HEALTHY HOOVES & COAT
Contains organic zinc, organic copper and essential fatty acids for strong feet, healthy skin and glowing coats.

FIREARMS ROOM

OSPREY TAC-RIFLE DOUBLE RIFLE PADDED BAG

Description

Hold up to 2 firearms securely in this tactical rifle bag ensuring your prized possessions are well looked after before, during and after use. Made of heavy-duty nylon, this bag will ensure your firearms are well protected for many years to come.

SPECIFICATIONS

- 2 separate padded rifle compartments with adjustable securing straps
- Thick foam padding
- 5 zip-up pouches for your magazines and accessories
- Carry handles
- Heavy duty zippers
- Material: Heavy-duty water-resistant nylon

Available in 44; 48 or 52 inch.
